## **Managing Complications in Pregnancy and Childbirth**

The emphasis of the manual is on rapid assessment and decision making. The clinical action steps are based on clinical assessment with limited reliance on laboratory or other tests and most are possible in a variety of clinical settings.

## **Obstetric Decision-Making and Simulation**

Simulation is becoming an integral part of medical education and has already a well-established role within anaesthesia training, with many examination questions already modelled on simulation scenarios. The clinical diversity and multidisciplinary nature of an obstetric team creates the ideal environment for simulation training. It enables the team to develop their knowledge of clinical emergencies whilst becoming more aware of the importance of human factors. This book is a practical guide to inspire clinical leads to establish simulation within their delivery suite. The book comprises an extensive obstetric scenario library, with each scenario broken down into learning outcomes, a list of staff and equipment needed, specific stages mapped to learning outcomes with appropriate results/investigations and a checklist of ideal actions to enable the post-scenario debrief. Written by consultant obstetric anaesthetists, this book will appeal to medical practitioners interested in facilitating obstetric simulation.

## **WHO Recommendations for Augmentation of Labour**

Optimizing outcomes for women in labor at the global level requires evidence-based guidance of health workers to improve care through appropriate patient selection and use of effective interventions. In this regard, the World Health Organization (WHO) published recommendations for induction of labor in 2011. The goal of the present guideline is to consolidate the guidance for effective interventions that are needed to

reduce the global burden of prolonged labor and its consequences. The primary target audience includes health professionals responsible for developing national and local health protocols and policies, as well as obstetricians, midwives, nurses, general medical practitioners, managers of maternal and child health programs, and public health policy-makers in all settings.

## **Analgesia, Anaesthesia and Pregnancy**

Analgesia, Anaesthesia and Pregnancy focuses on pre-empting problems and maximising quality of care. Every chapter of this well-established practical guide has been completely updated and revised. All aspects of obstetric medicine relevant to the anaesthetist are covered, from pre-pregnancy management to conception, throughout pregnancy, to postnatal care. The authors have identified over 150 potential complications, each covered in two parts: 'problems/special considerations' and 'management options', with key points prominently displayed for quick reference. A section on organisational aspects such as record keeping, training protocols and guidelines makes this an important resource for any labour ward or hospital dealing with pregnant women. Presented in a clear, structured format, this practical summary will be invaluable to

any anaesthetist encountering obstetric patients, whether they are a practiced consultant or still in training. It will also be useful for obstetricians, neonatologists, midwives, nurses and operating department practitioners wishing to extend or update their knowledge.

## **Decision Making in Medicine**

This popular reference facilitates diagnostic and therapeutic decision making for a wide range of common and often complex problems faced in outpatient and inpatient medicine. Comprehensive algorithmic decision trees guide you through more than 245 disorders organized by sign, symptom, problem, or laboratory abnormality. The brief text accompanying each algorithm explains the key steps of the decision making process, giving you the clear, clinical guidelines you need to successfully manage even your toughest cases. An algorithmic format makes it easy to apply the practical, decision-making approaches used by seasoned clinicians in daily practice. Comprehensive coverage of general and internal medicine helps you successfully diagnose and manage a full range of diseases and disorders related to women's health, emergency medicine, urology, behavioral medicine, pharmacology, and much more. A Table of Contents arranged by organ system helps you to quickly and easily zero in on the information you need. More than a dozen new topics focus on the key diseases and disorders encountered in daily practice. Fully updated decision trees guide you through the latest diagnostic and management guidelines.

## **Clinical Embryology**

This comprehensive atlas is unique in combining information on the embryological development of the

human with detailed presentation of the congenital malformations encountered in clinical practice. As a consequence it will not only assist practitioners and trainees in recognizing and evaluating malformations, but also enable them to understand how a malformation has developed and to explain the mystery of congenital malformations to relatives and patients. The book is organized according to anatomic region, with additional chapters on hernias, tumors, lymphogenesis and lymphatic malformations. According to WHO statistics, each year congenital anomalies result in approximately 3.2 million birth defect-related disabilities worldwide. All too often, however, training in embryology is now a neglected area, and medical graduates frequently lack confidence in their knowledge of the field. *Clinical Embryology: An Atlas of Congenital Malformations* will help to rectify this deficit and to ensure that malformations are comprehended and managed appropriately. It will be of value for postgraduate trainees in pediatric surgery, pediatrics, and neonatology, undergraduate medical students, and general practitioners/family physicians.

The best way to prepare for the primary or maintenance of certification examinations in dermatology, pathology or dermatopathology.

## **Self-Assessment in Dermatopathology**

Pulmonary embolism (PE) presents a blockage of the pulmonary artery (PA) by material (ie: thrombus, air, fat, amniotic fluid, tumour, or foreign body) that originated elsewhere. PE may range from small emboli discovered incidentally to massive emboli causing immediate hemodynamic instability. In this book, the authors discuss the causes, symptoms and treatment for pulmonary embolism. Topics include parenteral anticoagulant therapy; incidence and predictors in acute intraoperative pulmonary thromboembolism; surgical management of PE; technical and clinical aspects of MRI for pulmonary embolism; and radiological imaging with cement as a causative factor in PE.

## **Pulmonary Embolism**

Trauma is the leading cause of death among people under the age of 40 and it ranks third for all age groups. Still, relatively few clinicians specialize in trauma and training is often obtained through experience. The

number of trauma patients is expected to continue to grow as pre-hospital care continues to advance. As well, hospitals increasingly see trauma treatment, which requires no pre-approval, as a good source of revenue. Given these developments, the number of opportunities for specialists trained in trauma, including anesthesiologists and critical care physicians, will expand in the years ahead. This book addresses the need for an up-to-date, comprehensive and clinically focused volume for practitioners and trainees in trauma anesthesia and critical care. It is organized by organ system. The editor is an attending physician at a major urban hospital center recognized worldwide for its outstanding emergency medical services including trauma care and is recruiting leading trauma anesthesiologists to contribute. Anesthesiologists, pain medicine physicians, critical care physicians and trainees are the target audience.
