Alongside the formal development of Judaism from the eleventh through the sixteenth centuries, a robust

Jewish folk religion flourished—ideas and practices that never met with wholehearted approval by religious leaders yet enjoyed such wide popularity that they could not be altogether excluded from the religion. According to Joshua Trachtenberg, it is not possible truly to understand the experience and history of the Jewish people without attempting to recover their folklife and beliefs from centuries past. *Jewish Magic and Superstition* is a masterful and utterly fascinating exploration of religious forms that have all but disappeared yet persist in the imagination. The volume begins with legends of Jewish sorcery and proceeds to discuss beliefs about the evil eye, spirits of the dead, powers of good, the famous legend of the golem, procedures for casting spells, the use of gems and amulets, how to battle spirits, the ritual of circumcision, herbal folk remedies, fortune telling, astrology, and the interpretation of dreams. First published more than sixty years ago, Trachtenberg's study remains the foundational scholarship on magical practices in the Jewish world and offers an understanding of folk beliefs that expressed most eloquently the everyday religion of the Jewish people.

Why is the number seven lucky--even holy--in almost every culture? Why do we speak of the four corners of the earth? Why do cats have nine lives (except in Iran, where they have seven)? From literature to folklore to private superstitions, numbers play a conspicuous role in our daily lives. But in this fascinating book, Annemarie Schimmel shows that numbers have been filled with mystery and meaning since the earliest times, and across every society. In *The Mystery of Numbers* Annemarie Schimmel conducts an illuminating tour of the mysteries attributed to numbers over the centuries. She begins with an informative and often surprising introduction to the origins of number systems: pre-Roman Europeans, for example, may have had one based on twenty, not ten (as suggested by the English word "score" and the French word for 80, *quatrevingt* --four times twenty), while the Mayans had a system more sophisticated than our own. Schimmel also reveals how our fascination with numbers has led to a rich cross-fertilization of mathematical knowledge: "Arabic" numerals, for instance, were picked up by Europe from the Arabs, who had earlier adopted them from Indian sources ("Algorithm" and "algebra" are corruptions of the Arabic author and title names of a mathematical text prized in medieval Europe). But the heart of the book is an engrossing guide to the symbolism of numbers. Number symbolism, she shows, has deep roots in Western culture, from the philosophy of the Pythagoreans and Platonists, to the religious mysticism of the Cabala and the Islamic Brethren of Purity, to Kepler's belief that the laws of planetary motion should be mathematically elegant, to the unlucky thirteen. After exploring the sources of number symbolism, Schimmel examines individual numbers ranging from one to ten thousand, discussing the meanings they have had for Judaic, Christian, and Islamic traditions, with examples from Indian, Chinese, and Native American cultures as well. Two, for instance, has widely been seen as a number of contradiction and polarity, a number of discord and antithesis. And six, according to ancient and neo-platonic thinking, is the most perfect number because it is both the sum and the product of its parts ($1+2+3=6$ and $1 \times 2 \times 3=6$). Using examples ranging from the Bible to the Mayans to Shakespeare, she shows how numbers have been considered feminine and masculine, holy and evil, lucky and unlucky. A highly respected scholar of Islamic culture, Annemarie Schimmel draws on her

vast knowledge to paint a rich, cross-cultural portrait of the many meanings of numbers. Engaging and accessible, her account uncovers the roots of a phenomenon we all feel every Friday the thirteenth.

AYASOFYA-2 (Bilinmeyenler)

Running through the articles in this volume is the theme of the appropriation and subsequent naturalization of Greek science by scholars in the world of medieval Islam. The opening paper presents the historiography of this process, and the focus is then placed on Ibn al-Haytham, one of the most original and influential figures of the 11th century, and in particular in his contribution to the science of optics, both mathematical and experimental, and the psychology of vision. Professor Sabra then continues the analysis of how Greek thought was developed in the Islamic world with two studies of work based on Euclid's geometry and two on critiques of Ptolemaic astronomy. The final articles turn specifically to questions in the history of logic - Aristotelian syllogism, and Avicenna's views on the subject - matter of logic.

Toplumsal Tarih, Nisan 2019'da "Mütareke Dönemi'nde Siyasal Temsil, Seçimler ve Halkçılık" başlıklı özel bir dosyayla, siyasal merkezin çöktüğü ve oluşan iktidar boşluğu içerisinde alternatif arayışların hâzlandığı Mütareke Dönemi'nin egemenliğin kaynağı olarak halkın nasıl tanımlanacağı, siyasal temsil modelleri, meşruiyetin temeli ve seçim sistemleri gibi tartışmalarına odaklanıyor. Dosyada bir araya getirilen makaleler, bu arayışların uluslararası bağlamı ile birlikte yerellerdeki yansımaları da kapsamaya çalışıyor. Nurcan Gürboga ve Cangül Örnek'in ortak editörlüğü ve makale katkılarıyla hazırlanan dosya; Ahmet Demirel, Mehmet Ö. Alkan, Erol Ülker, Neslihan L. Başaran-Lotz, Alexander E. Balistreri ve Hakan Özoğlu ile birlikte, dönemin çeşitli aktörlerinin iktidar arayışları ve kurtuluş modellerine meşruiyet kazandıran ihtiyaçlarına ve halkın kim olduğu sorusu etrafında şekillenen siyasal temsil meselesine, seçimlere ve tümüyle ilişkili olarak halkçılık konusundaki tartışmalara değinerek, bu yelpazenin zenginliğini yansıtmaya amaçlıyor. Dosya dâhilindeki sayfalarda ise iki önemli makale dikkat çekiyor. Bora Keskiner ve Arvin Cemil Schick'in makalesi; tılsım olarak kullanılan, ifa getirdiğine ve insanlar muradına erdirdiğine inanılan; sayılar, harflerin, ve/veya kelimelerin belirli şekillerde düzenlenmesiyle oluşan vefklerin, 1700–1701 yıllarında İstanbul'da bir medresenin açılışına duyurulmuş bir tarih manzumesi içeren bir levha şeklinde düzenlenmiş olarak emsallerinden ayrılan ilginç bir örneğini tanıttıyor. Hazal Özdemir'in makalesiyse Doğu Anadolu'dan Kuzey Amerika'ya yönelen Ermeni göçünü kontrol altına almaya çalışmış Osmanlı Devleti'nin pasaport politikalarını inceliyor ve yerel fotoğraflar, polis ve devlet arasındaki birliğin gösteriyor. Bu sayı da ayrıca Tarih Vakfı'nın liselerde yürüttüğü farklı projelerin sonuçlarını tartışan ve bizzat gençlerin deneyimlerini ve üretimlerini yansıtan haber ve makalelere de yer veriliyor. Murat Cankara, Osmanlı'da Gayrimüslim Basından başlıklı köşesinde bu ay İstanbul'da çıkan Karamanlıca Terakki dergisinin 15 Temmuz 1888 tarihli sayısı'nda yer alan "Çingânelere Dair" başlıklı yazıyı, iç içe geçen ansiklopedik bilgi, hikâye, efsane ve hurafeyi arkasına alarak üretilen ötekiliğin ve basının klişelerinin inşasına nasıl katkıda bulunabileceğinin altını çizerek aktarıyor. Emel Seyhan ise her ay hazırladığı köşesinde Osmanlı basını'nda 100 yıl önce üzerinde durulan haberleri aktarmaya devam ediyor.

In the late spring of 1718 near the village of Pozarevac (German Passarowitz) in northern Serbia, freshly conquered by Habsburg forces, three delegations representing the Holy Roman Emperor, Ottoman Sultan, and the Republic of Venice gathered to end the conflict that had begun three and a half years earlier. The fighting had spread throughout southeastern Europe, from Hungary to the southernmost tip of the Peloponnese. The peace redrew the map of the Balkans, extending the reach of Habsburg power, all but expelling Venice from the Greek mainland, and laying the foundations for Ottoman revitalization during the Tulip period. In this volume, twenty specialists analyze the military background to and political context of the peace congress and treaty. They assess the immediate significance of the Peace of Passarowitz and its longer term influence on the society, demography, culture, and economy of central Europe.

Osmanl?n?n gündelik hayat?, sosyal yap?s?, toplum gelenekleri, inançlar?, ordu ve askerli?i, güzel sanatlar?, antropolojisinin yan? s?ra ?iir ve edebiyat?na dair her ?ey... Bu kitap günümüz insan?n?n Fuzûlî, Bâkî, Nedîm gibi ?airlerin eserlerini kolayca okuyup anlayabilmesi amac?yla haz?rland?. Bu ?iiri vücuda getiren 650 civar?nda dîvân ve mesnevînin yakla??k 2.000.000 beyti taran?p eski edebiyat?n nirengi noktalar? madde ba?lar? haline getirilerek zengin örneklerle izah edildi. Osmanl? ?iiri K?lavuzu'ndaki madde ba?lıklar?, bugün yanl?? bir adlandırmayla daha çok “Divan ?iiri” diye bilinen edebiyat?n temel kavramlar?n? örnekleriyle aç?kl?yor. K?lavuzu kullananlar?n ellerine ald?klar? eski bir ?iir metnini, önemli ölçüde çözüp tad?na varabilece?i inanc?nday?z. Eski ?iir, aradaki engeller kald?rıldı??nda gerçekten okumas? ve yorumlamas? son derece zevkli bir me?galedir. Bu ?iirin her beyti, bize yüzyıllar öncesinden gönderilmiş birer bilmece gibidir. Bundan 300-500 sene önce ya?am?? bir söz ustas?n?n zihninin k?vr?mlar?ndan kopan ince bir nükteyi 21. yüzyılda yeniden ke?fedip zevkine varabilmek, bamba?ka bir heyecan konusudur. Your youth will definitely leave you, and if you do not remain within the sphere of the licit, it will be lost, and rather than its pleasures, it will bring you calamities and suffering in this world, in the grave, and in the Hereafter. But if, with Islamic training, you spend the bounty of your youth as thanks in uprightness and obedience, it will in effect remain perpetually and will be the cause of gaining eternal youth. The Mystery of Numbers

This book, first published in 1957, is the study of 14th-century Arab historian Ibn Khaldun, who founded a special science to consider history and culture, based on the philosophy of Plato and Aristotle and their Muslim followers. In no other field has the revolt of modern Western thought against traditional philosophy been so far-reaching in its consequences as in the field of history. Ibn Khaldun realized that history is more immediately related to action than political philosophy because it studies the actual state of man and society. He found that the ancients had not made history the object of an independent science, and thought it was important to fill this gap. A factual acquaintance with the conclusions of Ibn Khaldun's reflections on history is not the same as the full comprehension of their theoretical significance. When these fundamental questions are answered, it becomes possible to pose the specific question of the relation of Ibn Khaldun's philosophy of history, or his new science of culture, to other practical sciences and, particularly, to the art of history. After an exposition of the major trends of Islamic historiography, part of this book attempts to answer this question through the analysis of the method and intention of the sections of the 'History' where Ibn Khaldun himself examines the works of major Muslim historians, shows the necessity of the new science of culture, and distinguishes it from other practical sciences.

Egyptian magic dates from the time when the predynastic and prehistoric dwellers in Egypt believed that the earth, and the underworld, and the air, and the sky were peopled with countless beings, visible and invisible, which were held to be friendly or unfriendly to man according as the operations of nature, which they were supposed to direct, were favourable or unfavourable to him. In -nature and attributes these beings were thought by primitive man to closely resemble himself and to possess all human passions, and emotions, and weaknesses, and defects; and the chief object of magic was to give man the pre-eminence over such beings. The favour of the beings who were placable and friendly to man might be obtained by means of gifts and offerings, but the cessation of hostilities on the part of those that were implacable and unfriendly could only be obtained by wheedling, and cajolery, and flattery, or by making use of an amulet, or secret name, or magical formula, or figure, or picture which had the effect of bringing to the aid of the mortal who possessed it the power of a being that was mightier than the foe who threatened to do evil to him. The magic of most early nations aimed at causing the transference of power from a supernatural being to man, whereby he was to be enabled to obtain superhuman results and to become for a time as mighty as the original possessor of the power; but the object of Egyptian magic was to endow man with the means of compelling both friendly and hostile powers, nay, at a later time, even God Himself, to do what he wished, whether the were willing or not. The belief in magic, the word being used in its best sense, is older in Egypt than the belief in God, and it is certain that a very large number of the Egyptian religious ceremonies, which were performed in later times as an integral part of a highly spiritual worship, had their origin in superstitious customs which date from a period when God, under any name or in any form, was unconceived in the minds of the Egyptians. Indeed it is probable that even the use of the sign which represents an axe, and which stands the hieroglyphic character both for God and \"god,\" indicates that this weapon and. tool was employed in the performance of some ceremony connected with religious magic in prehistoric, or at any rate in predynastic times, when it in some mysterious way symbolized the presence of a supreme Power. But be this as it may, it is quite certain that magic and religion developed and flourished side by side in Egypt throughout all periods of her history, and that any investigation which we may make of the one necessarily includes an examination of the other.
