The Maritime Boundaries of the Indian Ocean Region

Adopting an integrated, multidisciplinary approach to the political geography of the Indian Ocean, this study analyses the Law of the Sea, evaluates the national legislation of those Indian Ocean littoral states which have proclaimed their maritime limits over offshore waters, examines the numerous bilateral and trilateral agreements on continental shelf and seabed limits of the states in the region. It also previews the potential demarcations in the region of study. Apart from its well written text, perhaps the most important aspect of the work is the exceptional series of beautifully drawn maps and diagrams accompanied by detailed captions or commentaries, a unique collection worthy of publication on its own.

Birds of the Indian Ocean Islands

In field guide form, this text presents concise descriptions of each species, highlighting diagnostic features for ease of identification. Differences between sexes and plumages are discussed as well as the status of the bird, its habitat and call.

The Indian Ocean

Sharks, whales, huge waves, and months and months at sea – these are just a few of the things that James Adair and his friend Ben had to battle against when they decided to row unsupported across the Indian Ocean. Find out about their incredible journey, in this thrilling first-hand account.

War and Empire in Mauritius and the Indian Ocean

The four sovereign Indian Ocean states of Comoros, Madagascar, Mauritius and Seychelles, the two French overseas departments of Mayotte and Reunion, as well as the British colony of BIOT (Chagos), all form part of Africa. As insular nations and territories in an increasingly globalized, militarized and largely unregulated ocean, they face particular challenges. Commonly overlooked in the fields of African and international studies, this text traces the islands' history and explores their diverse contemporary social, political and economic trajectories. From human settlement and slavery to conflict resolution and piracy, the relations with continental Africa and the African Union feature prominently. Richly sourced, this comprehensive and up-to-date introduction to Africa's Indian Ocean islands covers a significant lacuna.

The luxury hotels and spas of Mauritius, the back-to-basics appeal of Rodrigues, the rugged natural beauty of Réunion - this new edition contains all the background and practical information you need to make the most of the Mascarenes.

Africa in the Indian Ocean

Who or what were Adam, Noah, and Elijah? Where they real or imaginary? What exactly was Creation? Did something really happen sometime around 4,000 BC as the Bible tells us? What exactly was leprosy? Why is the Islamic world in turmoil after centuries of quiescence? Are the mass uprisings democratic movements against tyrannical regimes, or fanatical drives to promote the spread of Islam, or is there something else far more sinister at play? Adam to Apophis provides answers to all of these questions. For millennia major religions have held the unflinching belief that at some future point the world will once more enter an 'end time' phase. According to Islamic, Hindu, Buddhist, Jewish, and Mayan reckoning that 'end time' phase is this current century. Christianity also holds the same belief. During such phases the earth has been subjected to airbursts and meteoric impacts which in turn have spawned decades long sequences of major environmental traumas in the form of extreme weather, volcanic eruptions, massive earthquakes, and tsunamis. This 'future' phase is itself part of a larger cycle to which the Earth has been subjected a number of times during the past 6,000 years, resulting each time in worldwide societal collapse. Religious or mythological texts exist which feature fantastic creatures and long lived superhuman beings. The records have been fastidiously preserved for millennia. Jewish and Chinese texts have preserved associated chronologies. However these ancient chronologies have been repeatedly discounted or ignored by modern scholarship. In the past few decades science has built up its own independent chronology of the earth's recent past by means of dendrochronology, ice cores, ice rafting, sedimentology, volcanology and astronomical retro calculations. These now provide us with a tangible record of climatic and terrestrial traumas stretching back thousands of years. At first sight the two disciplines would appear to be in total opposition- the one seemingly relying on 'faith' and 'fabricated' evidence, and the other on scientific reason and hard fact. Given

therefore the seeming polarity one would therefore expect to find little if any synchronicity between the two. What happens if we overlay the templates? Modern science has recently discovered an important earthly traumatic cycle known as Bond Events which occur every 1400-1500 years. The religious texts also clearly display knowledge of this cycle. Islam for example holds the belief that it will only last some 1400-1500 years. Adam to Apophis demonstrates that the concept of millenarianism is no idle fantasy but ultimately rests upon a firm foundation of real physical traumas. The book traces this primary cycle in stages back from the present day to: Bond Event 1: the advent of Islam in the 6th century AD when there was massive terrestrial and social upheaval worldwide. Bond Event 2: the 9th century BC where we discover the same pattern. In the Bible this is represented by the Elijah cycle of stories which focus upon a hitherto unidentified massive volcanic eruption in Arabia, but with clear evidence from regions as far afield as China that the trauma was worldwide. Bond Event 3: Noah's Flood, his true identity and the real location of the 'Ark' - still a major religious site comprising the largest cemetery in the world with millions of bodies buried there. The identities of the Chinese Emperors Yao, Shun, and Yu and a second impact site. Piora Oscillation: Death of Adam. The Nephilim. The Chinese Flame Emperors. The Mahabharata and Krishna Bond Event 4/ 5.9 Kiloyear Event: The true nature of 'Creation', the identity of Adam, the Ramayana and the Burckle Crater. Adam to Apophis is an original and compelling work. It will be of indispensable interest not only to scientists and academics in a variety of disciplines, but also to the layman of whatever or no religious persuasion.

As humanity enters the Anthropocene epoch the oceans are more at risk than ever before as a result of the increased exploitation of its resources. The Indian Ocean is the third largest ocean in the world comprising 20% of the water on the Earth's surface. The sea lanes in the Indian Ocean are among the busiest in the world with more than 80 percent of global seaborne trade in oil transiting through the Indian Ocean and its vital chokepoints and an estimated 40% of the world's offshore oil production comes from the Indian Ocean. The importance of this region cannot be underestimated and there is no doubt that there are many opportunities for economic growth and job creation presented by the waters washing the shores of the Indian Ocean Rim. In order to ensure a desirable future for humanity it is necessary to make use of the ocean's resources in a sustainable and responsible manner. Climate change is affecting the Indian Ocean negatively, placing a strain on the ability to ensure food security and damaging the economies of small island states that depend on fisheries and aquaculture for their livelihoods. Increasing ocean temperatures and ocean acidification are taking a toll on ecosystems. This book is the first of its kind, providing fresh insights into the various aspects and impacts of the Blue Economy in the Indian Ocean Region: from shifting paradigms, to an accounting framework, gender dynamics, the law of the sea and renewable energy, this handbook aims at increasing awareness of the Blue Economy in the Indian Ocean Region and to provide evidence to policy-makers in the region to make informed decisions. The contributions are from a mixture of disciplines by scholars and experts from seven countries.

The World

What does multiculturalism mean in Mauritius? This question was the starting point of an ethnographic study on an island state in the Indian Ocean that had always been part of a global project and always been (post)colonial. The introduction of citizenship education at school in this Republic with its ethnically, religiously and linguistically diverse population serves as an example for the analysis of how different

approaches to multicultural policy-making collide. The negotiations on the school subject illustrate the organisation of cultural difference by the state mainly through Indo-Mauritian and Creole nationalism.

The Blue Economy Handbook of the Indian Ocean Region

This book offers a detailed account of the legal issues concerning the British Indian Ocean Territory (Chagos Islands) by leading experts in the field. It examines the broader significance of the ongoing Bancourt litigation in the UK Courts, the Chagos Islanders' petition to the European Court of Human Rights and Mauritius' successful challenge, under the UN Convention of the Law of the Sea, to the UK government's creation of a Marine Protected Area around the Chagos Archipelago. This book, produced in response to the 50th anniversary of the BIOT's founding, also assesses the impact of the decisions taken in respect of the Territory against a wider background of decolonization while addressing important questions about the lawfulness of maintaining Overseas Territories in the post-colonial era. The chapter 'Anachronistic As Colonial Remnants May Be...' - Locating the Rights of the Chagos Islanders As A Case Study of the Operation of Human Rights Law in Colonial Territories is open access under a CC BY 4.0 license via link.springer.com.

A major new examination of the Indian Ocean, revealing how the region has become a hotly contested geopolitical flashpoint Throughout history, the Indian Ocean has been an essential space for trade, commerce, and culture. Every European power has sought to dominate it. Now, after a lull in the postwar period, control of major shipping routes has once again become a critical aspect of every rising state's ambition to be a global power. Darshana M. Baruah shows how governments from Washington, DC, to Nairobi and Canberra are expanding their interests in the region. The Indian Ocean is resource rich, strategically placed, and home to over two billion people. Island nations have become more important than ever, with Madagascar forming ties with Russia and the Comoros with Saudi Arabia. It is also through the region that China engages with Africa and the Middle East. This is a compelling account of the geopolitical significance of the Indian Ocean—showing how the region has taken centre stage in a new global contest.

Modern Maps and Atlases

This book gives readers an in-depth and up-to-date account of India's external and internal threats in a deteriorating global security environment. It shows that while partnerships with some countries have strengthened, anxieties persist with others such as China and Pakistan. Similarly, India has not been able to cope with the challenges of internal security emerging from violence in Kashmir, insurgency in the north-east, to mention a few. Problems of global terrorism and global warming stare us in the face. Tensions between major powers, threats and counter-threats between major and middle powers, and international hotspots like Georgia and Afghanistan remind us that there is intense competition for strategic space. India as an upcoming power is treading its path carefully and is developing meaningful partnerships with all major powers. China's reluctance to proceed further in resolving the boundary dispute with India, its reported incursions on the borders and its rapid military modernisation has caused anxiety in India. India is nevertheless upgrading its military capability to meet any Chinese threat. Pakistan's lack of adequate action in punishing those responsible for the 26/11 Mumbai terrorist attack and its reluctance to destroy the infrastructure of terrorism in Pakistan has put a question mark on the future of India Pakistan relations. These and various other threats and challenges are discussed in this volume, latest in a unique series with contributions from academics, political commentators and military personnel.

This volume collects and combines research on regional integration projects beyond Europe and in the Global South across a wide range of policy issues. Given the plurality and diversity of regional organisations, there is a growing need to systematically analyse, assess, and explain the performance of regionalism. Acknowledging the considerable differences in settings, institutional design, and politico-economic environment of regional organisations, the expert contributors move beyond EU-centric notions to offer a profound overview and propose new dimensions of innovative performance research. Systematic and in-depth research from Eurasia, Asia, Africa, and Latin America on organisations such as the Eurasian Economic Union, South Asian Association for Regional Cooperation, Indian Ocean Commission, Shanghai Cooperation Organisation, African Union, and the Organisation of American States, enables us to identify the conditions and determinants that shape performance across regions, actors, policy areas, and settings. The book provides readily accessible, important, and novel information to students and scholars of political science, international relations, EU and European studies, peace and conflict studies, comparative regionalism, interregional and inter-organizational studies, and area studies, and persons interested in specific policy fields such as trade, security, or development policy.

This book deals with the various interdisciplinary issues of the Indian Ocean, individually and collectively, such as its history, geography, nautical elements, economics, trade routes (old and new), blue economy, deep-sea mining, fisheries management, tourism, scourge of piracy, pollution, Law of the Sea (UNCLOS 1982), and the different perspectives of its littoral countries on geopolitics, international law, international relations and maritime partnerships. It is the most important ocean in the world – 33% of the global population lives in the area and 50-60% of the world's maritime trade transits through it. In addition, around 60% of global oil, and 26% of global gas reserves, along with pristine beaches are located here. To comprehend the interdisciplinary issues, the editor embarked on a voyage to discover, persuade and collaborate with exceptionally brilliant, influential experts from prominent littoral countries – India, Indonesia, Iran, South Africa, Malaysia and Singapore – with relevant experience to expound the above subject areas. In addition, geopolitical conflicts/hostilities and trade wars are on the rise; war seems

inevitable but not imminent. Any conflict is likely to originate in other oceans and seas but will end up impacting the Indian Ocean's littoral countries. Accordingly, these countries must comprehend the interdisciplinary issues and the special role of the Indian Ocean to prevent all-encompassing wars/hostilities from widening at a global level and thereafter must flesh out plans to shield themselves. They must also understand the area's role in working towards global peace by comprehending the above interdisciplinary issues. The role of the Indian Ocean in global peace can only be achieved through maritime partnerships between its littoral countries, and their avoidance of impulses to invite outside power(s) to balance each other's power. However, maritime partnerships are easier said than done. At the very least, the maritime partnership between two major Indian Ocean littoral powers – India and Indonesia – is critical to shield the region from geopolitical firestorms. Hopefully, this maritime partnership's tactic of embracing a carrot-and-stick approach will eventually persuade global powers from outside the Indian Ocean region to improve their conduct to achieve global peace.

This major new field guide covers Madagascar and the Indian Ocean islands, including the Seychelles, Comoros and Mascarenes (Mauritius, Réunion and Rodrigues). The Malagasy region contains one of the most extraordinary concentrations of biodiversity in the world. Its recognition as a zoogeographic region in its own right has recently been confirmed and, all taxa combined, the region was found to hold the second most distinct assemblage of vertebrates in the world after the Australian region, despite being the smallest of them all. This Helm Field Guide covers the whole of the Malagasy region, which comprises the unique island of Madagascar and the various islands and archipelagos of the Indian Ocean including the Seychelles, Comoros and Mascarenes (Mauritius, Réunion and Rodrigues). Every resident and migrant species is covered in full detail with a colour distribution map for each. Vagrants are also treated in detail, but without maps. All species are illustrated on a beautiful series of 124 colour plates, with artwork from John Gale and Brian Small. Conveniently, the plates have been arranged so that all the key species of the various archipelagos are placed together in sections. This is a major work of reference on the birds of the region and will remain the standard text for many years to come.

The Contest for the Indian Ocean

This book addresses historical issues of colonialism and race, which influenced the formation of multicultural society in Mauritius. During the 19th century, Mauritius was Britain's prime sugar-producing colony, yet, unlike the West Indies, its history has remained significantly under-researched. The modern demographic of multi-ethnic Mauritius is unusual as, in the absence of an indigenous people, descendants of colonists, slaves and indentured labourers constitute the majority of the island's population today. Thus, it may be said that the Mauritian nation was \"assembled\" during the period in question. This work draws on an in-depth examination of the two labour systems through which the island came to be populated: slavery and indenture. In studying the relevant laws, four legal events of historical importance within the context of these two labour systems are identified: the abolition of the slave trade, the abolition of slavery, private indentured labour migration and state-regulated indenture. This book is notable in that it presents a legal analysis of core historical events, thus straddling the line between two disciplines, and covers both slavery and indentured labour in Mauritian history. Mauritius, as an originally uninhabited island, presents a rare case study for inquiries into colonial legacies, multiculturalism and race consciousness. The book will be a valuable resource to scholars worldwide in the fields of slavery, indenture and the legal apparatus of forced labour.

The Encyclopedia of Africa presents the most up-to-date and thorough reference on this region of ever-growing importance in world history, politics, and culture. Its core is comprised of the entries focusing on African history and culture from 2005's acclaimed five-volume *Africana* - nearly two-thirds of these 1,300 entries have been updated, revised, and expanded to reflect the most recent scholarship. Organized in an A-Z

format, the articles cover prominent individuals, events, trends, places, political movements, art forms, business and trade, religions, ethnic groups, organizations, and countries throughout Africa. There are articles on contemporary nations of sub-Saharan Africa, ethnic groups from various regions of Africa, and European colonial powers. Other examples include Congo River, Ivory trade, Mau Mau rebellion, and Pastoralism. The Encyclopedia of Africa is sure to become the essential resource in the field.

The Indian Ocean in World History

Tracing the history of the sugar trade and its consumption in the Persian Gulf during the 18th century, this book explores the interplay of social, economic and political interests created by this popular commodity. The study of sugar has, until now, focused mainly on its significant growth in European markets from the mid-17th century and, more recently, parallel developments in East Asia. In this book, Daito shows how the sugar trade also developed in, and became important to, the Indian Ocean World. Studying how the consumption of sugar wavered after the brutal overthrow of the Safavid dynasty in 1722, this book shows how the Dutch East India Company and the trading network responded to political upheavals in the region and, consequently, the changing trading conditions. Arguing that sugar continued to be imported and consumed despite these political disturbances, *Sugar and the Indian Ocean World* proves this was not a period of economic stagnation for the region, and shows how sugar became an important intersection between socio-cultural practices and the Indian Ocean economy.
